

ATTACHMENT 7

Table of content of Attachment 7

1. Summary
2. Acute Oral Toxicity in the Rat
3. Oral Acute Toxicity Study of Supplemented Humic Acid (DHS) in Mice with "Limit Test" Method
4. Cumulative Toxicological Investigation of HUMET® Solution
5. Prolonged HUMET® Feeding in the Rats (Summary)
6. 60 days Toxicological Study of a Powder Humic acid Product in Rats
7. Preliminary Report on the Study of the HUMET® Composition's Anticlastrogenic Effect in the Chromosomes of Human Peripheral Blood
8. The Testing of HUMET® with Salmonella typhi-murium reverse mutation assay ("Ames Test")
9. Determination of Carcinogenic Polyaromatic Hydrocarbons
10. Pharmaco-Kinetics of ⁸³Sr- and ¹⁰³Ru -Humic acid complexes (Summary)
11. Effects of Supplemented Humic Acid on the Haematological Parameters of Iron Depleted Anaemic Rats (preliminary report)
12. First Results in Experimental Breast Cancer (Summary)
13. Effects on the Sexually Inactive Male Rat (Summary)
14. Study on the Effects of Different Formulations of Humic Acid on the Iron- and Other Microelements in iron deficient rat pups
15. The Effects of Humic Acid Metal Chelates on Rats
16. The Effect of Feeding Dotated and Undotated Humic Acid Products on Mineral Status of Rats (in Hungarian)
17. Cardioprotective Effects of SHA and HA preparations in the Isolated working heart subjected to ischemis/reperfusion
18. Observation of the Effect of HUMET derivatives on Male Rat's Sexuality
19. HUMET® Syrup: Preclinical Studies and Clinical Observation (an overview)
